

- Century Series Valves
- Ultra-Flow® Series Valves
- 200B Series

OmniReg™, a modular pressure regulating device, enabling the user to quickly and accurately set the exact downstream pressure required for any application. No more guessing. No more estimating.

### Features

- One model fits all Century and Ultra-Flow Series and 200B Series valves
- Simple and easy to install
- Enables the user to quickly and accurately set the downstream pressure
- Easy-to-read, top mounted graduated dial with clearly marked settings for control of downstream pressure
- Operates with a down-stream pressure regulation range up to 700 kPa and inlet pressure up to 1400 kPa, and requires only 4 L/m to operate
- Delivers accuracy of +/- 20 kPa
- Desired pressure can be set with water on or off
- Low profile design permits use in applications with limited space
- Manufactured of heavy-duty, corrosion-resistant glass filled nylon with stainless steel and brass hardware
- Maintains constant downstream pressure, regardless of widely varying inlet pressure

### Operating Specifications

- Flow Range: 4-1100 L/m
- Inlet Pressure Range: Up to 1400 kPa
- Pressure Regulation: 35-210 kPa (OMR-30), 35-700 kPa (OMR-100)
- Inlet pressure must be 70 kPa greater than the desired downstream pressure setting

#### Note:

Century Series and Ultra-Flow valves manufactured prior to January 1996 and 200B Series valves prior to January 1998 may be upgraded with OmniReg® and a Retrofit Kit.

Simply turn the dial to the desired pressure

Graduated dial features easy-to-read settings

Performance You Can Count On

### Ordering Information

Code	Description
OMR-30	OMNIREG, 35-210 kPa Modular Pressure Regulator Conversion Kit
OMR-100	OMNIREG, 35-700 kPa Modular Pressure Regulator Conversion Kit
